

*Dear transplant nurse,*

*Transplant nurses are totally awesome people!! After my lung transplant, when I started taking the meds orally, I had a horrible reaction to one of the drugs. My nurse sat with me for over an hour while I took one pill at a time with applesauce, to try to determine which drug it was. As soon as I took the Cellcept - I immediately started throwing up. So that drug was eliminated from my list. She was so kind and patient with me, when I was terrified. She was always so upbeat and positive!!*
